I Built the Ultimate Website AI Agent in n8n With No Code

In this video, I build the ultimate website AI assistant using a team of AI agents! A manager assistant oversees three specialised sub agents, each handling a specific functionality, making the system more efficient and scalable.

This approach ensures that no single agent gets overwhelmed with tasks and tools, leading to better automation and smarter decision making.

@Zaher Aboushakra Nice! What tools are you planning on adding?

👍 0 Reply

Zaher Aboushakra • Mar 15

@Kia Ghasem i have a e-commerce website, so i want to facilitate the purchase process and the item finding. I will check what tool i can add or what flow i can do to make it easier for me and the customer :)

Kia Ghasem • Mar 16

@Zaher Aboushakra Nice! Hook it up to a document with your product and website info - That should help!

👍 1 Reply

Zaher Aboushakra • Mar 16

@Kia Ghasem yeah i believe exporting the full product list and feed it into my supabase will help. My only challenge if i can make the searched product in the chat bot, buy it directly without going to all the steps of checkout

Kia Ghasem • Mar 16

@Zaher Aboushakra Hmmmm Not sure if I would recommend this - AI Agents aren't accurate 100% of the time yet - So I'd probably stay away from doing automatic payment related things using an AI Agent - Unless you can make a pre-defined system that makes the process more programmatic

@Kia Ghasem Thank you for your video. I have a this error in DB:
Error searching for documents: PGRST202 Could not find the function
public.match_documents(filter, match_count, query_embedding) in the schema cache
Searched for the function public.match_documents with parameters filter, match_count,
query_embedding or with a single unnamed json/jsonb parameter, but no matches were
found in the schema cache.

Can you help me? or what is structure of documents table?

Kia Ghasem • 18d

@David Demetrashvili The problem is from your SupaBase database - Clear the database and upload the documents into it again - See if that works

I am also having issues with the website chat. It shows a chat icon, but when it opens up it only shows Powered by n8n, but no placeholder for the text messages by the user. So I can not write any messages.

Can someone help me please.

Kia Ghasem • 16d (edited)

@George Iskef Hmmm - Check the code you're using in your header to make sure it has everything - Otherwise you might be having issues with some other code overwriting the instructions for this chatbot - Did you have a chatbot before?

Great video @Kia Ghasem thank you so much it will be so much helpful to implement into our sites..do you have any prompt guide i can refer to thats shown in the video..

👍 1 Reply

Kia Ghasem • 14d

@Pulkit Rawal The prompts in the video are reflected in the template - once you download it and import it into your workflow, the prompts will be there!
